PRODUCT ADVANTAGES

WHY ARE
FRESH AND FUNNY AIRFRESHENERS
SO UNIQUE ?

01 EU manufacturer

02 NO allergens

03 Organic / natural

07 WE DO IT DIFFERENTLY

04 HAND MADE

05 Thematic fabrics and design

06 Covers

08 up to 3 placement methods

01 EU manufacturer

In our warm friendly manufactory in a small village near Trnava in Slovakia it all happens.

02 NO allergens

Despite the fact that intolerance or reactions to external stimuli are a purely subjective matter as the individual evaluates the so-called external stimuli, we committed ourselves in 2019 to extract and replace all possible allergens (listed in the list of allergens). At present, we can proudly say that we have succeeded and we can name our fragrant compositions as ANTI-ALLERGIC.

03 Organic / natural

Due to the fact that we are currently able to provide approximately 1,500 fragrant compositions, our motto is to use the terms ORGANIC / NATURAL.

100% natural for our selected fragrances means that they are natural but not modified for certification. This means that they are produced in the same way as Bio and ECO products, but are not further processed for certification and may (but may not) contain natural ingredients.

04 HAND MADE

We considered the extent to which we communicate handmade production in our modest but colorful company. Of course, we operate machines for chopping fabrics, or packaging, cards, etc. , also blowing equipment, sewing manual machines, melting equipment, etc. But machines without our operation, sewing, production of fragrance mixture, filling, assembly are just a homeless scenery. So the fact that we write by using customized tools in our handmade production is absolutely apt. 😊

05 Thematic fabrics and design

We choose each substance ourselves. Either we use the creative art of our suppliers and buy an already patterned fabric or we have our own ideas / themes printed on a fabric, made of traditional 100% Indian cotton. That is why the theme of each fabric is our unique and imaginative manuscript.

I don't think it's necessary to highlight the fun, nice, really unique, etc, etc ... 😊 the visual of our characters, but what is definitely worth mentioning, we can make about 150 different models, for which cutting knives, sewing machines and the whole a series of people who help turn ideas into real reality.

06 COVERS

We are aware of the importance of a healthy and clean environment. Especially when it comes to the depletion of natural resources and the limited possibilities of self-regulatory mechanism in nature. In addition, human's own behavior causes the greatest irreparable damage to the natural environment, so it is necessary to think about ecology and environmental protection. Human-dominated industry needs to address waste-free technologies, make full use of non-renewable resources and look for ways to keep industrial and household waste to a minimum. The use of waste in the form of new products is one of the ways in which the facts described above can be positively influenced. Plastics do not occur in nature, they are produced in large industrial plants in a complex production way. This process has high energy requirements, which also place a significant burden on the environment.

That is why we have also committed ourselves in the first step to reducing the volume of plastic used as packaging material for our products and then replacing it smoothly. In 2020, we reduced the proportion of waste in production by 54% and in terms of the material used, we incorporated the so-called regenerate. Regenerate is a raw material that is reusable, so the packaging material consumed by our products can be reused and therefore does not become waste.

Even the characters themselves, after being summoned, have their next mission and therefore recycle themselves. Often people use them as key rings, various pendants or wash and donate. By the way, if we are presenting gifts, I will not be allowed to forget that a certain amount of each fragrance sold is accumulated and at some point through the project www.pribehvone.sk it becomes a GIFT. We believe that every drop in the sea, river or lake is important. 🌟

07 WE DO IT DIFFERENTLY

Common air fresheners are available in the not-so-exciting form of paper “trees” or plastic containers, with a limited and bland range of scents that often fade quickly.

Our characters are nice, funny, diverse, brightly colored, simply so that everyone can choose. They are made of soft and supple material, which makes them pleasant not only to look at, but also to touch.

They are hand-sewn and decorated in small workshops in a fair way. When the tree or container reaches its end, it goes to other garbage. After smelling our character, you can use it as a key ring, for example.

The heart of each of our characters contains natural components and a high-quality perfume composition. This ensures that the fragrance does not dissipate so quickly.
